

Plot:

- Plot $\log(Q_{\text{act}})$ vs $\log(H)$ for Rectangular Notch

Along Horizontal Axis:

Along Vertical Axis:

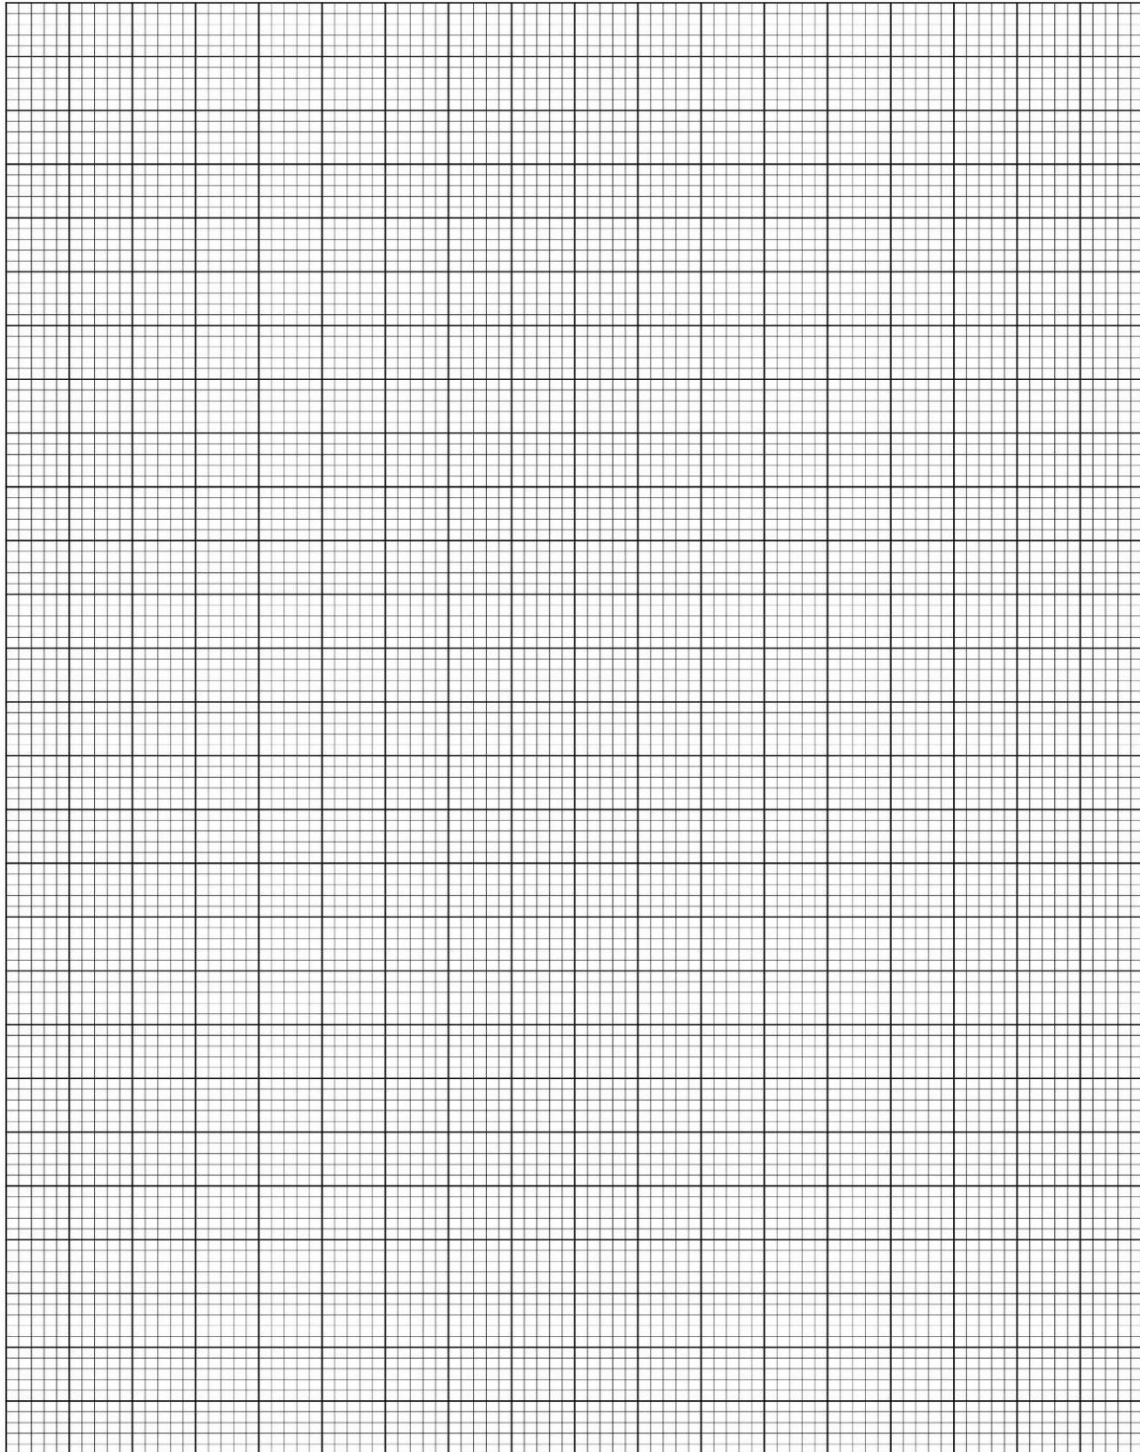

Plot:

- Plot $\log(Q_{\text{act}})$ vs $\log(H)$ for V- Notch

Along Horizontal Axis:

Along Vertical Axis:

Sample Calculation:

- Show a sample calculation for 1 observation from Rectangular Notch and 1 observation from V-Notch
- Find the value of n and K from graph for both the cases and prove that $K_{\text{rectangular}} < K_v$

Discussion:

- Why $K_{\text{rectangular}} < K_v$, give proper reasoning.
- Why the value of n differs from the theoretical value of $n_{\text{rectangular}}=1.5$ and $n_{v\text{-notch}}=1.5$
- Comment on the Plot $\log(Q_{\text{act}})$ vs $\log(H)$.
